assertion fails once factor exceeds gmin lower end (134)
factor, upper end (1e-7 units)
multiplier m of the midpoint constant
line through m=1 and m=24
printed (m=1, 2, 24)
fitted break-even m=22.6

final assertion needs a value below 0
drneg+er_drop+K, upper end (1e-7)
multiplier m of the Lipschitz allowance
line through m=1 and m=2
printed (m=1, 2)
fitted break-even m=1.86
