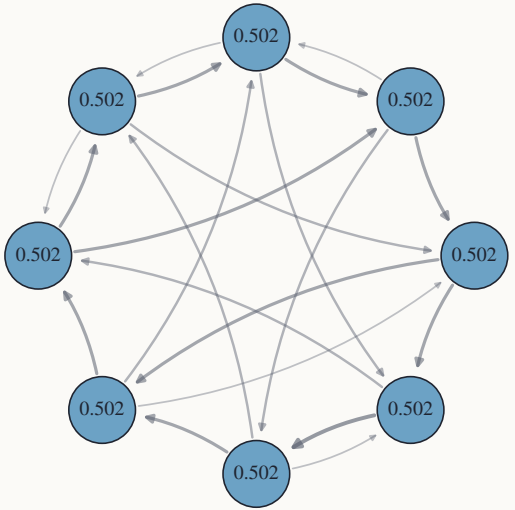
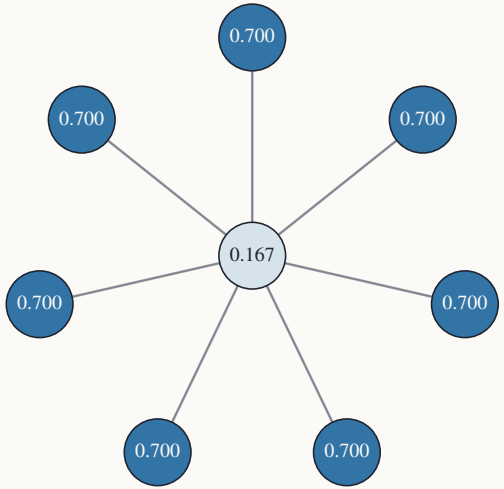
a graphe isotherme pondéré (W bistochastique)



valeur de Moran $\frac{1-r^{-1}}{1-r^{-8}} = 0.50196$, $r = 2$

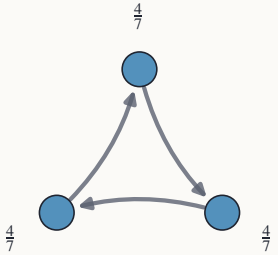
b étoile (non isotherme)



valeur de Moran $\frac{1-r^{-1}}{1-r^{-8}} = 0.50196$, $r = 2$

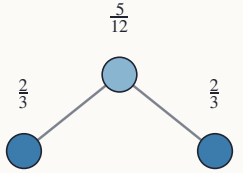
c

cycle $n = 3$ (exact)

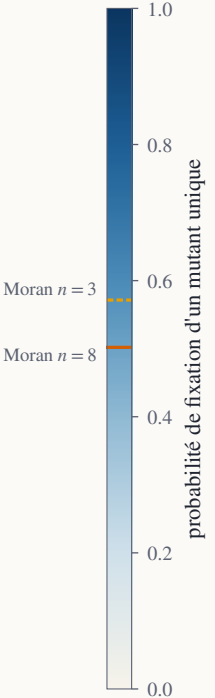


Moran $\frac{4}{7}$ partout

étoile $n = 3$ (exact)



Moran $\frac{4}{7}$; moyenne $\frac{7}{12}$



naissance–mort, sélection uniforme ; probabilités exactes (système linéaire sur les 2^n configurations, contrôlé par $\lim_t P^t$)
