
Local L^2 production $-u \cdot [(u \cdot \nabla)(Mu)]$ of one 3D triad field (48^3 grid)
voxels with $|\cdot| > 79.3$, same threshold in both panels
piecewise scale-dual, $\alpha' = 1/4$
volume mean $dE/dt = +2.6667$ (exact 8/3)
creates E
destroys E
Navier–Stokes control
volume mean $dE/dt = +0.0000$ (exact 0)
