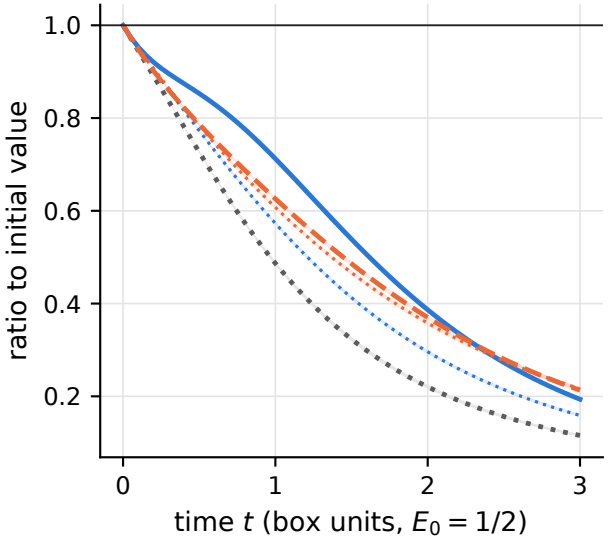
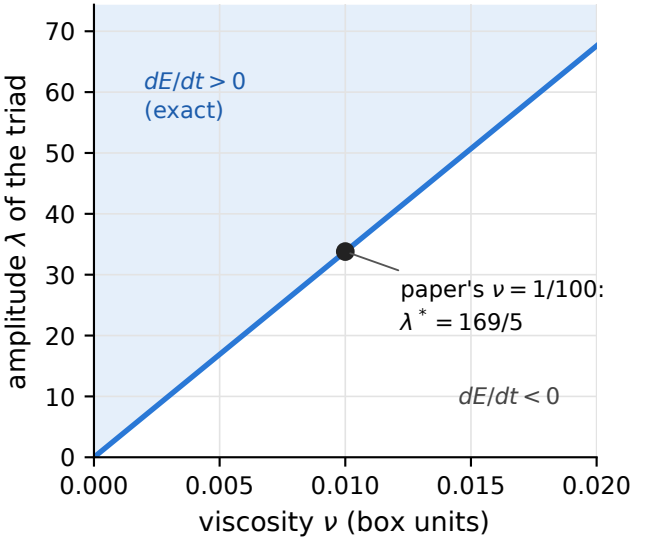
(a) inviscid, $\alpha' = 1/25$, 10 seeds (mean ± s.d.)
E/E₀, Navier–Stokes ($m \equiv 1$)
E/E₀, piecewise scale-dual
Q/Q₀, piecewise scale-dual
E/E₀, smooth (ML-α)
Q/Q₀, smooth (ML-α)
ratio to initial value
time t (box units, $E_0 = 1/2$)



(b) $\nu = 1/100$, $\alpha' = 1/25$, 10 seeds (mean ± s.d.)
ratio to initial value
time t (box units, $E_0 = 1/2$)



(c) growth threshold $\lambda^* = 2\nu\Omega/R = 3380\,\nu$
$dE/dt > 0$
(exact)
paper's $\nu = 1/100$:
$\lambda^* = 169/5$
$dE/dt < 0$
amplitude λ of the triad
viscosity ν (box units)
