Moran, 3 individuals, advantage $r = 2$
probability of having taken over
number of steps n
$P^n(1, 3)$ computed exactly
verified limit: 4/7
no selection: 1/3
The limit as a function of the advantage r
probability of taking over
mutants at the start i (out of $N = 10$)
Moran, $r = 1.5$
Moran, $r = 1$ (neutral)
Moran, $r = 0.8$
Wright–Fisher, 2000 steps
