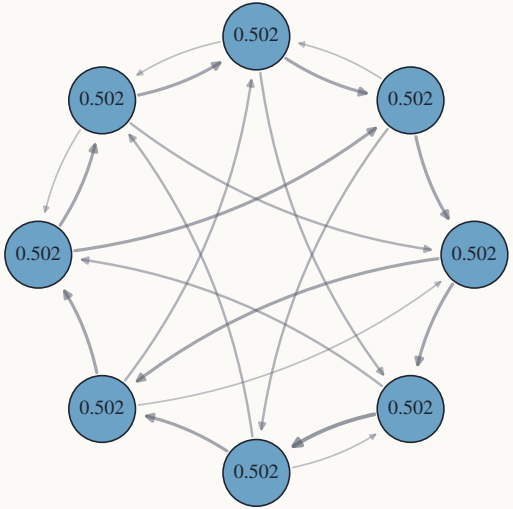
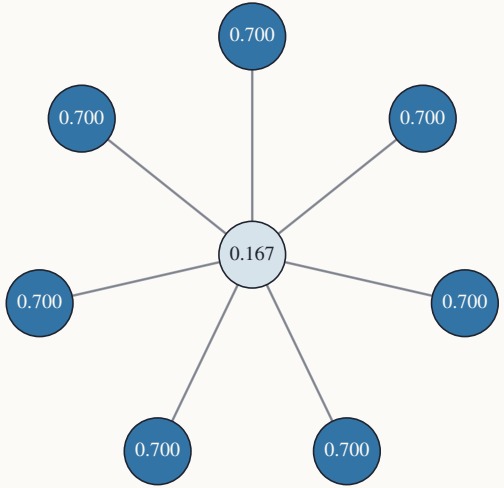
a isothermal graph (W doubly stochastic)



Moran value $\frac{1-r^{-1}}{1-r^{-8}} = 0.50196$, $r = 2$

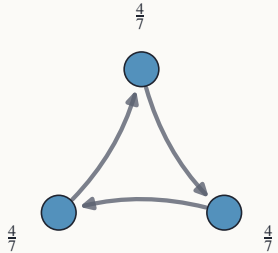
b star (non-isothermal)



Moran value $\frac{1-r^{-1}}{1-r^{-8}} = 0.50196$, $r = 2$

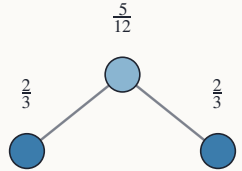
c

cycle $n = 3$ (exact)

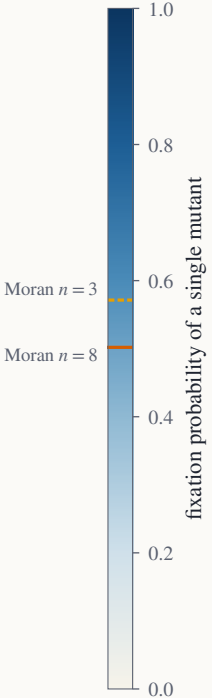


Moran $\frac{4}{7}$ everywhere

star $n = 3$ (exact)



Moran $\frac{4}{7}$; mean $\frac{7}{12}$



birth–death, uniform selection; exact probabilities (linear system on the 2^n configurations, cross-checked by $\lim_t P^t$)
